

BLEED

SAFE MARGIN

## TABLE TENT PRINTING

*Finished Product Size: 6" wide by 4" high*

**BLEED** - Your file needs to include a 0.125" bleed necessary for production.

Bleed is printing that goes beyond the edge of the sheet after trimming. If a bleed is not included in document setup, there is a good chance that there will be a gap between the edge of the printed area and the cut line. This happens because there is a tolerance when cutting the printed piece. More information on bleeds can be found on our website: [www.flexpress.com](http://www.flexpress.com)

**SAFE MARGIN** - Your file needs to include a 0.125" safe margin necessary

for production. Safe margin is the area around the edge of the sheet. If the safe margin is not included in document setup, there is a chance that the art close to the edge will get cut off due to machine shift during cutting. This happens because there is a tolerance when cutting the printed piece. More information on Cutting Tolerance can be found on our website: [www.flexpress.com](http://www.flexpress.com)
